

# ALEKSEI PETRENKO

Computer science Ph.D. student with background in deep reinforcement learning, algorithms, and systems.

## SUMMARY

---

Objective: Research internship in machine learning, AI, and/or robotics for summer 2021  
Key skills: Python, C++, C#  
PyTorch, TensorFlow, OpenCV  
Deep learning, deep RL, 3D, algorithms & data structures

## PERSONAL INFORMATION

---

Address: 615 S Kenmore Ave, apt. 101, Los Angeles, CA, 90005  
Phone: +1 (323) 961-17-12  
e-mail: [petrenko@usc.edu](mailto:petrenko@usc.edu)  
Website: <https://alex-petrenko.github.io>  
Date of birth: April 19, 1991

## EDUCATION & RESEARCH

---

2018-present Computer science Ph.D. student at University of Southern California, funded by USC  
Los Angeles Provost Fellowship (current GPA 4.0/4.0)  
USA Advisor: Prof. Gaurav Sukhatme, USC Robotic Embedded Systems Lab

Research interests: deep reinforcement learning, high-throughput RL, efficient ML systems, distributed RL, multi-agent learning and self-play, intrinsic motivation & exploration.

Recent coursework: reinforcement learning, statistical machine learning, advanced analysis of algorithms

2012-2014 M. Sc. in Computer Science at Nizhny Novgorod State Technical University (5.0/5.0)  
2008-2012 B. Sc. in Computer Science at Nizhny Novgorod State Technical University (4.95/5.0)  
Russia

## RECENT PUBLICATIONS

---

2020 Petrenko A., Huang Z., Kumar T., Sukhatme G., and Koltun V. Sample Factory: Egocentric 3D control from pixels at 100000 fps with asynchronous reinforcement learning. In ICML, 2020.  
[Arxiv](#), [Github](#), [Website](#)

## EMPLOYMENT HISTORY

---

2020 **PhD Research Intern at [Intel Labs](#)**  
Los Angeles Joined [Vladlen Koltun](#) and ISL to take on new challenges in deep reinforcement learning.  
USA Project scope and results to be announced.

2019 **PhD Research Intern at [Intel Labs](#)**  
Santa Clara Advised by Vladlen Koltun, worked on a research project aimed at scaling up model-free  
USA reinforcement learning for simulated environments using asynchronous actor-critic algorithms (APPO, IMPALA). Resulted in ICML submission titled “Sample Factory” (see publications).

Technologies: Python, PyTorch, TensorFlow, RLlib, Ray, OpenAI Gym, Slurm

2015-2018 Nizhny Novgorod Russia	<b>Tech Lead at <a href="#">itSeez3D</a></b> Lead algorithms and systems developer in the computer vision startup. My main project with itSeez3D was the AI-based human digitization engine called <a href="#">Avatar SDK</a> . <ul style="list-style-type: none"> <li>Developed a deep learning-based method for accurate 3D reconstruction of the human head from a single portrait photo</li> <li>R&amp;D for the automatic generator of full-body characters (skeleton animation, rendering, deep learning)</li> <li>Optimized deep neural networks for deployment (quantization, compression, etc.)</li> <li>Worked on various applications for the avatar engine: mobile, desktop and virtual reality. Developed and deployed interactive demos for major conferences and exhibitions: SIGGRAPH, GDC, VRX.</li> </ul> My avatar automatically created from a single photo by the Avatar SDK demo app: <a href="https://skfb.ly/6FUYY">https://skfb.ly/6FUYY</a>  <u>Key technologies:</u> <ul style="list-style-type: none"> <li>C++11/14 and OpenCV for the algorithms</li> <li>TensorFlow and Keras for deep learning</li> <li>Python for prototyping and scripting</li> <li>OpenGL, Unity &amp; Unreal for 3D rendering, Oculus SDK + Unity for VR</li> </ul>
2013-2015 Nizhny Novgorod Russia	<b>Senior Software Engineer at itSeez</b> Computer vision startup and for many years a company behind the OpenCV library. At itSeez I was involved in the development of the first portable consumer <a href="#">3D scanner</a> . <ul style="list-style-type: none"> <li>3D scanning algorithms for various depth sensor platforms: Intel RealSense, Google Tango, Apple iPad + Occipital Structure Sensor, etc.</li> <li>Developed a cloud backend for the 3D reconstruction pipeline</li> <li>Created mobile and desktop 3D scanning applications</li> <li>Algorithms for polygonal mesh and point cloud processing, filtering and refinement of noisy 3D data, algorithms that prepare meshes for 3D printing: mesh “hollowisation” (polygon offset), ensuring manifoldness, etc.</li> </ul> My full-body scan made with itSeez3D software: <a href="https://skfb.ly/CzyX">https://skfb.ly/CzyX</a>  <u>Technologies:</u> C++, OpenCV, C# & Xamarin, Python+numpy, Django, AWS, Docker
2010-2013 Nizhny Novgorod Russia	<b>Software Engineer at <a href="#">Tecom</a></b> Developed a big real-time (frame perfect) massively parallel broadcast automation system with many levels of redundancy. Position in Tecom allowed me to acquire expertise in many areas of software engineering, from architecture to low-level optimization. <u>Technologies:</u> C++ and Qt, C#, Java, Javascript, Python, Linux

## SKILLSET

---

### Programming languages:

- C++ (highly advanced). C++ is my favorite language for it's speed, portability, and weird elegance. C++11/14/17, STL, Qt, CMake.
- Python (advanced). Experience includes research, prototyping and automation
- C#, Java, Javascript (extensive experience from industry, proficient with some catching up)

### Skills:

- Software development and architecture. Creating software systems from ground up: mobile, desktop, server-side, VR, plugins, frameworks. Multithreading, optimization, patterns, data binding, loose coupling, APIs, UI, etc.
- Deep learning: CNNs, RNNs, ResNets, UNets, GANs, VAEs, etc.

Deep reinforcement learning. Implemented and deployed many RL methods from scratch: Double/dueling DQN, Reinforce, A2C, PPO, APPO, IMPALA, etc. Frameworks & tools: PyTorch, Tensorflow, Ray, RLLib, OpenAI Gym, etc.

- Algorithms. Solid background from industry and programming competitions. Graph algorithms, computational complexity, data structures, etc.
- Computer vision, OpenCV, depth sensors & 3D data processing
- Cloud, scalable services, clusters (AWS API, Docker, Slurm)
- 3D rendering (OpenGL, Unity3D, [Magnum](#)) and VR (Oculus)

## SELECTED OPEN-SOURCE PROJECTS

---

- 2020 <https://github.com/alex-petrenko/sample-factory> the fastest (at the time of release) open-source on-policy RL implementation (see publications)
- 2020 <https://github.com/alex-petrenko/faster-fifo> faster alternative to built-in Python multiprocessing.Queue
- 2018 <https://github.com/alex-petrenko/tf-reinforce> Tensorflow implementation of classic policy gradient algorithms for continuous control tasks
- 2017 <https://github.com/alex-petrenko/rl-experiments> deep RL algorithms (Double DQN, A2C) in the context of the gridworld environment called MicroTbs
- 2016 <https://github.com/alex-petrenko/4dvideo> open-source volumetric video recorder and player for Intel RealSense and Google Tango. It can capture and playback “4D” clips like [this](#) in real time with a single mobile device. Features a very fast Delaunay triangulation [algorithm](#) based on modified Guibas-Stolfi method.
- Visit my personal website to find more code and projects.

## ACHIEVEMENTS

---

- 2018-2020 Provost PhD Fellowship from University of Southern California
- 2012 Scholarship of the President of the Russian Federation
- 2012 Winner of “Osipovsky Cup 2012” programming contest held in Kovrov State Technological Academy
- 2012 Winner of the Code Game Challenge at ACM ICPC Southern Subregional Contest
- 2011-2012 Participant of the ACM ICPC, World Semifinals (NEERC)
- 2010-2012 Prize winner of the ACM ICPC, World Quarterfinals (NEERC Southern Subregional)

## OTHER INTERESTS

---

- Futurology, transhumanism, AGI, singularity. Authors: E. Yudkowsky, G. Egan, R. Kurzweil, K. Eric Drexler, V. Vinge
- Fundamental science: physics, cosmology, evolutionary biology
- Entrepreneurship
- Hobbies: motor racing, karting
